

VITEBSKAYA LESOPILKA

ONE OF THE LARGEST PRODUCERS AND
EXPORTERS OF SAWN TIMBER FROM
CONIFERS IN BELARUS

ABOUT THE COMPANY

**Витебская
лесо́пилка**

**2003 –
year of foundation**

A legal entity of the Republic of Belarus. We are part of the Estonian group of companies Kaamos

**We export more than 90 %
of our products**

We work in the markets of the Baltic States, Western Europe, China, South Korea, and Japan

**More than 200
people**

The company's team

**Authorized Economic
operator**

Official status

International certificate

Guarantee of the legal origin of wood and its products

ISO

Certificates of International standards ISO 50001, ISO 45001, ISO 14001, ISO 9001

Products

We produce more than 150 sections of environmentally friendly sawn timber, wood chips, and sawdust

Production

We improve technologies, upgrade equipment, and apply the concept of lean manufacturing

FinScan

PRODUCTION

30 hectares

Territory of the Vitebskaya Lesopilka

Production capacity per year:

- more than 200,000 m³ of sawn timber
- more than 380,000 m³ of wood chips
- more than 190,000 m³ of sawdust

Raw materials:

- we buy high-quality coniferous wood with an international certificate of guarantee of origin
- the timber is 14–25 cm in the upper section

Drying facilities

We dry sawn timber in the Mühlböck chambers to transport and furniture humidity

Optimal recycling

- we use the technology of high-speed sawing and efficiently process the sawmill with a high yield of finished products
- waste-free production
- lean manufacturing concept

Equipment from industry leaders:

- Equipment from Veisto (HewSaw), Mühlböck, Volvo, FinScan and other leading manufacturers.
- We optimize and modernize our production.

Prompt transportation of final products:

- We deliver carefully packed sawn timber.
- We use any type of transport to optimize delivery times in the supply chain

PRODUCTS

Sawn Timber

We produce from environmentally friendly coniferous wood – pine and spruce

Production capacity per year – more than 200,000 m³

Circular sawing gives a perfect geometry

Wide size range:

- thickness 14–75 mm,
- width 75–200 mm,
- length 3000–6000 mm

% humidity on request:

- transport humidity 18 %,
- special drying 6–12 %

We sort sawn timber on an automated line using advanced FinScan equipment.

We securely pack the finished products to protect them from precipitation and damage during transportation.

We use any type of transport to optimize delivery times in the supply chain.

We are engaged in customs declaration of products.

An application where the quality and accuracy of dimensions, the appearance of materials are of particular importance: in construction, furniture production.

Wood chips

We produce from environmentally friendly coniferous wood-pine and spruce

We are engaged in customs declaration of products.

Production capacity per year-more than 380,000 m³.

Waste-free production: using wood chips as raw materials for the production of sulfite and sulfate pulp, semi-finished packaging cardboard, fiberboard and particle board, pellets, etc.

We use any type of transport to optimize delivery times in the supply chain.

Sawdust

We produce from environmentally friendly coniferous wood-pine and spruce.

Production capacity per year – more than 200,000 m3.

We use any type of transport to optimize delivery times in the supply chain.

We are engaged in customs declaration of products.

Waste-free production: the use of sawdust for the production of pellets – ecological fuel.
